Main Ingredients

Luteina and Natural Zeaxanthin they protect healthy cells from free radical damage solar radiation.

Natural Beta Carotene that turns into vitamin A for healthy vision.

Vitamin E is essential for healthy vision and prevents eye oxidation damage, and turns back the development of degenerative illnesses related to oxidation such as: Cataracs, glaucoma, and macular degeneration related to aging.

Vitamin C helps maintain healthy inner ocular blood pressure of blood and maintains healthy levels of eye collagen.

DHA (Docosahexaenoic acid) is an Omega 3 fatty acid which is the basic block of connective tissue of the brain and retina, and it is essential for normal vision and healthy maintenance of the nervous system.

Billberry Extract is a powerful antioxidant that protects and fortifies the capillaries taking care of the damage caused by oxidation and improves vision, mainly night vision.

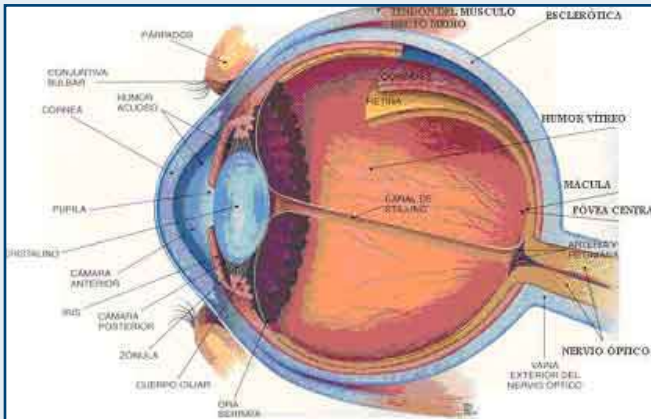

Did you know...

50% of the information we receive from our environment we receive through our eyes? The vast information we receive in a single glance of our surroundings is kept for a second in our minds and then it goes away almost instantly. We don't notice much! The human eye is an optical system consisting of a spherical diopter and lens, which are capable of forming an image of objects on the inner surface of the eye, in an area called the retina.

How does Focus 20/20 work in our body?

It protects the eye's fragile connective tissue from free radicals and solar radiation, fortifies the capillary veins and improves micro circulation inside the eyes, nourishes the light receptors in the retina, maintains a healthy macular and optic nerve, helps prevent degenerative illness related to oxidation and the aging of the eye. Improves vision in general for people of any age.

How To Use

Take 2 capsules every day with plenty of water.

Proprietary Botanical Extract Blend (bilberry, ginkgo biloba, spinach, tomato, chlorella & eyebright)	105 mg	†
Fish Oil Powder	45 mg	†
DHA	6.7 mg	†

* Percent Daily Values are based on a 2,000 calorie diet.
† Daily Value not established

Other ingredients: Cellulose and silicon dioxide.

Eye Sight Loss

Progressive eye sight loss affects millions of people each year. Macular degeneration is related to the aging process and is the main cause of eye sight loss and blindness in the United States. It is considered that there are at least 6 million people that suffer from this illness and 200 thousand new cases are diagnosed each year, which the experts believe that by the year 2020 there will be 15 million people suffering from this illness. Macular degeneration (the retina's center) is a degenerative process related to the oxidation that our eyes suffer due to free radicals and solar radiation. This process is increased after the age of 40, which diminishes even more after 60. By this time most people will develop some degree of macular degeneration, loss of vision and other eye illnesses related to oxidation such as: Glaucoma, cataracts or macular degeneration.
